

Geography at St. Michael's

“We are geographers”

At St. Michael's CE Primary School, we aim to provide a high-quality geography curriculum which develops pupils' interest in the variety of human and physical features, both their local surroundings and in the wider world, in order for them to succeed and excel in geography. This learning is progressive and provides an interesting and exciting way for pupils to engage and develop their natural sense of curiosity. They ask and answer questions using key geographical vocabulary.

Aims

- Children should use a range of sources, including atlases, globes, aerial images and digital technologies to investigate and explore fascinating aspects of the human and physical world.
- Children should feel a sense of place and develop an understanding of lifestyles and cultures in different areas of the world.
- Children should be able to notice patterns and compare locations.
- Opportunities to use fieldwork and observational skills to develop geography learning should be provided.
- Key vocabulary should be used by children when communicating geographically.
