# Fluent in Five 

## Daily Arithmetic Practice Week 5

## Year 6

## Year 6 - Week 5

Please note, we always recommend reading 'Your Guide to Using Fluent in Five' before using these resources with your class.

## This week in a nutshell

Now children are confident with the structure of Fluent in Five, the calculation load and complexity is beginning to be increased to a level similar to the end of Key Stage 2 arithmetic test. However, there are still only 2 questions where a formal written method is needed.

- Mental subtraction focuses on subtracting decimals, including where there are an unequal number of decimal places, but where the place value boundaries are not crossed.
- Mental multiplication focuses on multiplying 3 single-digit numbers, using the commutative and associative law (e.g. calculating $8 \times 3 \times 3$ by understanding that you can calculate $3 \times 3=9$ and then multiply 8 by 9 ).
- Written addition and subtraction involves decimals, including where there is an unequal number of decimal places. In order to tackle these, it is important that children have a secure understanding of place value in decimals, and the role of 0 as a place holder.
- Addition of fractions with different denominators is introduced for the first time this week, but in this week's questions, one denominator will always be a simple multiple of the other.

## Answer Sheet

Remember, (M) is written next to those questions you should have tried to solve mentally first. (W) means a written method is usually more efficient for this question.

1. $\frac{1}{7}+\frac{3}{7}=\frac{4}{7}(\mathrm{M})$
2. $43.34+4.894=\mathbf{4 8 . 2 3 4}(\mathrm{W})$
3. $76.4-21.2=\mathbf{5 5 . 2}(\mathrm{M})$
4. $5 \times 6 \times 5=\mathbf{1 5 0}(\mathrm{M})$
5. $683 \times 7=\mathbf{4 , 7 8 1}(W)$
